2026 SPRING-SUMMER COLLECTION

ROSSIGNOL PRESENTS ITS FIRST LONG-DISTANCE TRAIL RUNNING SHOE, **THE VERCORS**

Just one year ago during the UTMB in Chamonix, Rossignol unveiled **its first high-performance trail running shoe, the Vezor**, the flagship of its Spring-Summer 2025 trail run collection. **The brand's entry into the trail run category amplified the brand's multi-season, multi-activity offer** and complemented its range of technical softgoods, active footwear, and mountain bikes.

It was the beginning of a decisive new chapter to support active mountain enthusiasts in their sporting adventures year-round, and a natural extension for a brand whose heart has beat to the rhythm of the mountains since 1907.

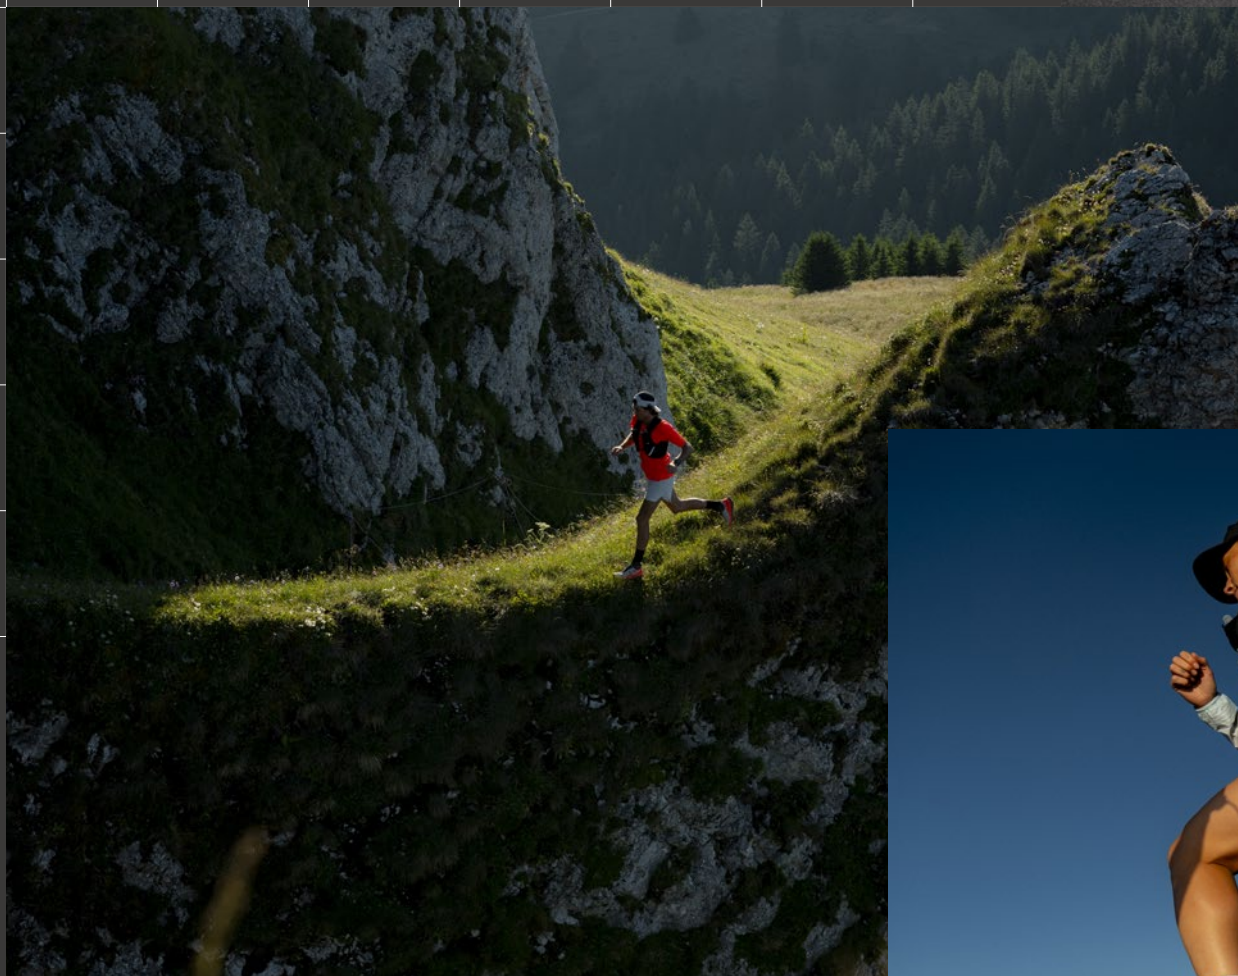

The introduction of the brand's first professional trail running team earlier this year was another stride forward. Tasked with competing in the most demanding races on the world circuit, from marathon distances to legendary ultra-trails, the **@rossignoltrailrunning** team reinforces the brand's history and enduring link to competitive performance.

Now today, committed to its path forward, Rossignol introduces the new flagship of its Spring-Summer 2026 collection, the **Vercors**. Designed for **endurance runners seeking cushion, performance, and long-lasting comfort**, the Vercors features a lightweight design and **E+FOAM midsole for protective and reactive cushioning**. The abrasion-resistant DuraGrip outsole, breathable Dragonfly Light upper, and Diapazon Shield X-LT comfort plate support runners mile after mile, ensuring every step forward feels as good as the first.

Drawing on over **a century of expertise and collaboration with top-tier athletes**, the brand has confirmed its ambition to become a major player in trail running while remaining true to its mountain sport heritage. Alongside the race-day ready Vezor and everyday versatility of the Venosk, the **all-new Vercors completes Rossignol's new trail run offer**, delivering the **technical features and world-class comfort for long-distance enthusiasts and endorphin addicts** to go the distance with confidence.

250 g per shoe (size UK 5)

Drop: 6 mm

Stack: 32 mm

Lugs: 4 mm

Cushion: high comfort, responsive,
long-lasting.

Terrain: mixed.

Comfort Fit.

ROSSIGNOL AND FEET: A LONG HISTORY OF EXPERTISE

For 118 years, **performance has been at the core of Rossignol's DNA**. Its history is marked by decades of competitive victories, technological innovations, and iconic products. Successes made possible by the brand's fine-tuned **development process** and recognized **expertise in foot mechanics**. Many of these traits acquired in its Design Lab in Montebelluna, Italy, a region regarded as the world epicenter for sport footwear and ski boot design.

For decades, Rossignol's specialized team of R&D engineers and technicians have spent each day studying the subtle nuances of the foot to develop the highest levels of performance, precision, comfort, and fit for competitive athletes and recreationalists alike.

Harnessing this experience, the brand has reworked its approach and is now applying its expertise to the art of trail running.

Following years of R&D, collecting thousands of foot scans, and carrying out extensive field testing, **Rossignol embarked on a new chapter of its history in the spring of 2025 with the launch of its first collection of high-performance trail running shoes and dedicated trail run apparel**. Perfectly complementing the brand's multi-season, multi-activity offer, and like every Rossignol product, each has been developed with the same expertise, technicity, and attention-to-detail that has made Rossignol the global reference in winter sports equipment for over a century.
